### **DETAILED ACTION**

The Declaration under 37 CFR 1.132 filed 10/4/10 is sufficient to overcome the rejection of claims 1-4, 6-8 and 11, 12 and 14 based upon obviousness.

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

The application has been amended as follows:

Please insert the following at page 1 below the title of the invention:

--This application is national stage of international application PCT/EP05/00794 which claims foreign priority under 35 USC 119(a-d) to German application 10 2004 005.4--.

Please replace the abstract of the disclosure with the following:

--The present invention relates to compositions for treating hard surfaces, comprising a water-soluble or water-dispersible compound as component A which is obtainable by reacting: aa) polyalkylenepolyamines, polyamidoamines, polyamidoamines grafted with ethyleneimine, polyether-amines and mixtures of said compounds, as component Aa; ab) if appropriate at least bifunctional crosslinkers which have, as

Art Unit: 1763

functional group, a halogenhydrin, glycidyl, aziridine or isocyanate unit or a halogen atom, as component Ab; and ac) monoethylenically unsaturated carboxylic acids, salts, esters, amides or nitriles of monoethylenically unsaturated carboxylic acids, chlorocarboxylic acids and/or glycidyl compounds, such as glycidyl acid, glycidylamide or glycidyl esters; and water; to a process for the preparation of a water-soluble or water-dispersible compound, to water-soluble or water-dispersible compounds preparable by the process according to the invention, and to the use of water-soluble or water-dispersible compounds according to the present application in compositions for treating hard surfaces.--

***Allowable Subject Matter***

Claims 1- 4, - 8, 11- 12 and 14 are allowed.

The following is an examiner's statement of reasons for allowance none of the instant reference discloses the same water soluble compound A as described in the claims.

Meixner et al. teach a detergent composition comprising surfactants including anionic, nonionic surfactants (col. 15- 16), and water soluble compound which is derived from the crosslinking of compound "a" including polyalkylenepolyamines and crosslinker compound "b" (abstract) wherein the compound "a" is grafted with ethyleneimine (abstract). Meixner et al. teach that the nitrogenous compounds or compound "a" reacts with at least one crosslinker compound "b" which is selected from

Art Unit: 1763

a group of crosslinkers including halogenhydrin (epichlorohydrin), glycidyl, aziridine, isocyanate and unsaturated carboxylic acid (col. 7: 65 - col. 8: 33). However, there is no suggestion in the teaching of Meixner et al. that the water soluble compound is formed in specific order with specific compounds as said in the claim. Meixner et al. fails to teach crosslinking polyalkyleneamine grafted with ethyleneimine and the crosslinker halogenhydrin, glycidyl, aziridine or isocyanate then reacting the product with unsaturated carboxylic acid. Meixner et al. only teach that the product formed in Michael reaction between unsaturated carboxylic acid reacts and polyalkyleneamine grafted with ethyleneimine.

Scherr et al. teach a water soluble compound is formed by reacting polyalkylenepolyamines with unsaturated carboxylic acid before reacting the product with halohydrin, glycidyl, aziridine or isocyanate (abstract).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
